Improving productivity and saving time

Andres Morales, of the company Legado IT, gives his impressions on developing applications with K2B Tools.

Because of our previous experience in the use of patterns, we found it easy to start working with patterns in K2B Tools. So it wasn't hard for us to adapt to this tool and we learned to use it without any problems. With K2B Tools, we discovered a very interesting and intuitive solution, but what we especially want to highlight is the support we've received: every time we needed help, we were given a fast and effective answer.

The benefits this tool provides developers include saving time in the generation of "repetitive" codes and screens, and having uniform applications, because using patterns allows you to consistently apply the same style and format to every screen.

Then, when it comes time for maintenance, having patterns makes it easy to maintain consistency, as the changes you make have a "downward" impact.

We believe that the use of K2B Tools has improved the productivity of our developers by automating the generation of "typical" screens, and we estimate that we've cut the time it takes to develop applications almost in half.

About K2B Tools

K2B Tools is a set of tools that automates the development of GeneXus applications while reducing development time and the complexity of applications.
Using Patterns technology, K2B Tools enables development teams to reach higher levels of productivity to generate applications that apply the best practices of Web development.
